## *TESIO POWER PEDIGREE MATCHING PROGRAM*

Tesio Power is used by breeders all over the world to upgrade their stock using the line breeding principles of the famous Italian breeder, Federico Tesio, who had many successes breeding from mares with modest pedigrees including the great Ribot. One of Tesio's key principles was to duplicate desirable ancestors in a mating. TesioPower has the tools to see pedigrees of individual horses and to search all available stallions for a match with a mare. It can also give some guidelines as to whether a particular mating is likely to produce a sprinter, a stayer or an early performing type. It must be noted however that this programme cannot, of course, predict the quality of any potential mating - it is merely one tool of many that can be used when planning a mating.

TasBreeders members have free access to Tesio matings for their first two mares, however a small charge will apply to pedigree matches for three or more horses.

Contact Brian Stewart (TasBreeders committee member) for more details on 0409 972 385 or email [bhstewart@bigpond.com](mailto:bhstewart@bigpond.com).
